and other friends and relatives in this city.

Read Jess Hensarling's ad on the second page of the Eagle today.

Phone the Hardy Newton market for that extra quart or pint of Glenview milk and cream. Whipping cream a specialty.

Commissioner J. J. Cahill of Smetana was in the city on business today. Mr. Cahill reports that his wife who has been ill for several weeks is very little better today and that she is still in a serious condition.

ATHLETIC CLUB GROWING.

The organization of the Bryan Athletic Club is practically completed and the club rooms are now open to the members, which number about fifty. The rooms are being fitted up as rapidly as possible, and every afternoon and evening several of the members of the body are present participating in some form of athletic amusement. The club has been furnished with one or two pool tables by the old Daily pool hall, which has been discontinued and this is another added attraction to the club. Hot and cold shower baths are to be installed in the near future, and the membership of the club is growing rapidly.

TO RURAL TEACHERS.

Chicago, Ill., Jan. 3.—Dear Mr. Superintendent: Many of our county superintendent friends in Texas seem not to understand that the manuals for use with the Elson readers—the state adopted books—are sent free of charge, and that a supply will be forwarded for the asking to all teachers using the Elson readers. For the greater convenience of the teachers in the rural schools we have issued a combined manual covering all four adopted readers:

Elson fourth grade reader, Elson fifth grade reader, Elson sixth grade reader, Elson seventh grade reader in our manual. A copy is being mailed to you under separate cover. If you can use a supply for distribution in your county fill out the inclosed card and they will be sent you, transportation prepaid. Very truly yours,
SCOTT, FORESMAN & CO.

From the foregoing it will be seen that the teacher can order direct or through this office. If you prefer the latter course, please notify me at once, giving number of copies you need and I'll gladly order for you. The manual contains 238 pages.
E. R. WILLIAMS.

IRON HAS NO FERTILIZING VALUE.

(G. S. Fraps, State Chemist.)
The use of oxide of iron as a fertilizer has been advocated to a small extent in Texas, but there is no evidence that it has any fertilizing value, or any other value to the soil, as a stimulant, a tonic or in any other way whatever. Iron is indeed essential to the life of plants, but plants require exceedingly small quantities, so small, indeed, that it is rarely estimated in a chemical analysis. Next to silica and alumina, soils contain more iron oxide or other iron compounds, than anything else. Few soils contain less than 26,000 pounds of oxide of iron per acre, to the depth of seven inches, and most soils contain much more.

and this quantity is abundantly able to supply the two or five pounds needed for large crops. Practical experience supports the same conclusion. The claim that oxide of iron has any value when added to the soil, as a stimulant, or tonic, or otherwise, is utterly unjustified and absurd.

MARRIAGE LICENSES DECREASE.

After an article, showing the comparison of the sales of marriage licenses in 1914 and 1915 was published by the Eagle about Dec. 1, 1915, the matrimonial market struck somewhat of a boom and according to the final figures the sales in 1914 led only by a small margin. The comparison is as follows:
White licenses sold in 1914.....145
Colored licenses sold in 1914.....232
Total licenses sold in 1914.....377
White licenses sold in 1915.....117
Colored licenses sold in 1915.....203
Total licenses sold in 1915.....320
This shows a decrease in 1915 of 28 in the sales of white licenses, 29 colored and a total decrease of 57.

REV. C. E. BULLOCK AT FREE BAPTIST CHURCH SERVICES.

"Selfishness the Greatest Hindrance to World-Wide Evangelism" was the theme used by Rev. Bullock in his sermon on "Missions" at the Free Baptist Church last night before a very attentive and well-filled house.

Man's highest aim in life should be to get men to bow to the will of Christ, it being the privilege and duty of every man to live and do, first, for God, second, for family and third, for business. Too many in life reverse the order and in so doing retard the world's evangelization. Rev. Bullock drew many illustrations from history of the lives of such characters as Alexander, Napoleon and others to show the effect of selfishness upon the life and evangelization of the world. "If we have not the spirit of Christ we are none of his," and his spirit is certainly not a selfish spirit, but one of love and sacrifice. There are something like one hundred non-professors to each one professor in this world, and we in the great conquest should go forth to perfect his will in the great labor of evangelization.

Much interest and enthusiasm was shown and at the close of the service many responded to a proposition made by the pastor and thereby expressed themselves as being more determined by the grace of God to be more considerate, more earnest and more prayerful in giving themselves into God's service to carry forth the mission of Christ, "The World's Evangelization."
C. C. WHEELER, Pastor.

LIMESTONE AS A FILLER

FOR FERTILIZERS.

Recently quite a heated discussion took place among certain chemists of Georgia relative to the use of limestone as a filler in fertilizers. The chemists representing the limestone interests maintained that limestone when added to the soil liberates practically an equivalent amount of potash therefrom in an available form, thus reducing the fertilizer bill. When pushed to the wall by their antagonists, they had to admit that their conclusions were based on conjectures and statements and were not backed by convincing experiments. As a matter of fact, it is not known how much, to what extent, or how fast limestone does replace potash in the soil. Its advantages as a filler lie chiefly in the fact that it serves as a drying agent, improving the mechanical condition of the fertilizer, so that it may be drilled in, instead of being broadcast. One has therefore to be very careful when interpreting such optimistic statements about the use of limestone as a filler.

CHARLES BUCHWALD,
Assistant Chemist, Texas Experiment Station, College Station, Tex.
